

DRUM PULLEYS

Luff Industries manufactures industry leading pulleys fabricated from heavy schedule pipe allowing for improved performance and longer life.

Maximum Concentricity

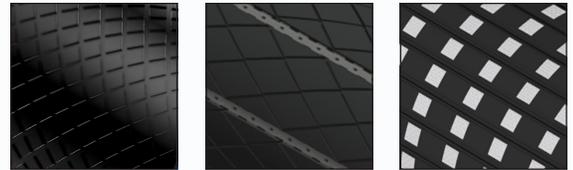

- Provides maximum contact with the belt
- Aids with belt tracking
- Reduces vibration and stress on the bearings
- Lowers decibels during operation

A large machined trapezoidal crown angle provides superior belt tracking and ensures maximum pulley concentricity.

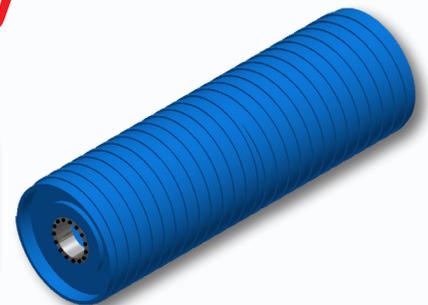

A variety of lagging options are available, including diamond grooved SBR, weld on slide lagging and ceramic lagging.

- Typically 50% thicker pulley shell absorbs more stress and protects against abrasive wear.
- The strength of these pulleys means less maintenance and reduced belt wear.

Heaviest Pulley in the Industry

Spiral drum pulleys offer a cleaning action while keeping constant belt contact.
